

Natasha Huffine is a highly experienced occupational therapist with nearly 20 years specializing in neurorehabilitation. As a CARF surveyor for medical rehabilitation, concussion, and brain injury specialty programs, she is dedicated to advancing quality standards in brain injury rehabilitation.

In collaboration with the Brain Injury Association of America (BIAA), Natasha contributed to the development of chronic disease management and rehabilitation guidelines for adults with moderate to severe brain injuries. As a Certified Brain Injury Specialist (CBIST) and trainer, she is passionate about mentoring professionals seeking certification in brain injury rehabilitation.

An accomplished published author, Natasha has contributed research in cognitive rehabilitation, visual perception, and traumatic brain injury (TBI). Additionally, she is a textbook author in the area of visual perception, further cementing their expertise in the field.

A seasoned speaker, Natasha has presented on brain injuries at local, state, and national conferences, sharing valuable insights with clinicians, researchers, and policymakers. Currently serving as a Clinical Manager at Origami Rehabilitation, she continues to lead, innovate, and advocate for individuals recovering from brain injuries.
